1993 PUBLIC USE TAX FILE

INTRODUCTION

The Internal Revenue Service 1993 Individual Public Use Tax File, which contains 94,202 records, was selected as part of the Statistics of Income program that was designed to tabulate and present statistical information for the 114.6 million Form 1040, Form 1040A, and Form 1040EZ Federal Individual Income Tax Returns filed for Tax Year 1993.

The Public Use Tax Files, which have been produced since 1960, consist of detailed information taken from actual tax returns. These files are sold in an unidentifiable form, with names, Social Security Numbers (SSN), and other similar information omitted. The primary uses made of these files have been to simulate the administrative and revenue impact of tax law changes, as well as to provide general statistical tabulations relating to sources of income and taxes paid by individuals.

The Public Use File is designed for making national level estimates. State codes are, however, provided for most returns with incomes under \$200,000. State estimates derived from this file, especially for the smaller states, should be used with caution. The 1993 file can be purchased through the Internal Revenue Service, Statistics of Income. Any questions concerning the cost and acquisition of the current Individual Tax File or past tax files for 1987 - 1992 should be directed to:

Public Use Files for each of the Tax Years 1960, 1962, and 1966 through 1986 are available through the National Archives and Records Service. Questions concerning cost, acquisition, and delivery of these historical tax model files, should be addressed to:

version (Individual or State) of the file under consideration.

Please refer to the sections of this booklet titled "Individual Tax File Sample Description" for a more detailed discussion of the Tax File.

DISCLOSURE AVOIDANCE PROCEDURES

To preserve the character of the microdata file while also protecting the identity of individuals, we have incorporated the following procedural changes in the Individual Tax File.

First, to make sure that it will be impossible to know whether a given taxpayer is represented in the sample, we have subsampled our 100 percent sample¹ at a 33 percent rate.

Second, those records that remain in our file from the 100 percent sample have been combined with other high income returns for the following processing changes:

As in past years, the State codes and all other geographic indicators have been removed for all high income records. Other codes and fields removed for these returns include: age and blindness indicators (for both primary and secondary taxpayers), alimony paid, alimony received, and personal property tax. Also, certain codes (age status, marital status, and exemptions for children living at home) have been modified (see section on Code Definitions for specific changes).

Then, all of the high income returns have been sorted from largest to smallest for the field "State and local income taxes deductions". In this field, for every three records, in descending order, the average State and local income taxes deduction has been determined and that value has been placed in the State and local income taxes deduction field for each of the three records. This has been done over that part of the sample containing non-zero values in these fields. If the last group of records contains fewer than three, these records have been combined with the group of three immediately before it. This method of disguising data is called "blurring".

¹Returns sampled at 100 percent for the Statistics of Income program include those with total income or loss of \$5,000,000 or more; those with business plus farm receipts of \$50,000,000 or more; and nontaxable returns with adjusted gross incomes or expanded incomes of \$200,000 or more.

1993 PUBLIC USE TAX FILE

High income returns have then been separated into 35 different classes based on age, marital status, the number of children living at home, and the size of salaries and wages. Within each of these 35 classes, returns have been sorted on salaries and wages. This field has then been blurred over consecutive records as described above for State and local income tax deductions. However, records have only been averaged with other records in the same class. Therefore, records within one of the 35 classes have not been averaged with records in any of the other 34 classes. The file was then sorted on real estate tax deductions (again, within the 35 classes), and the same blurring procedure has been repeated for real estate tax deductions.²

Third, all lower income returns (records with an adjusted gross income of less than \$200,000 and not from our 100 percent sample) have been blurred, nationally, for alimony paid and alimony received. Then, all lower income returns were sorted by State. After this sort, the records were blurred for real estate tax deductions, and State and local income taxes deduction (State of Wisconsin, only, for this last item) in the same manner as described above. The only difference between the processing of these records and that of the high income returns is that the lower income returns have been sorted for real estate tax deduction by individual state with no records from two different States being combined when averaging a field over a series of records.

Fourth, for all records on the file, the following changes have been made:

The fields containing other net income or loss, total adjustments, foreign housing adjustment, total taxes paid, personal property tax, industry code, primary social security number, and secondary social security number have been deleted and marked as "reserved." Also, all fields on the file have been rounded to the four most significant digits (e.g., \$14,371 = \$14,370 and \$228,867 = \$228,900).

The following table shows the number of returns in the sample for each State, and the number not State-coded for disclosure reasons as described above.

For greater details on this and other disclosure protection techniques used by the Statistics of Income, see: Strudler, Michael; Oh, H. Lock; and Scheuren, Fritz. "Protection of Taxpayer Confidentiality on the IRS Tax Model." Statistics of Income and Related Administrative Record Research: 1986, Internal Revenue Service.

Since individual records in this file may or may not contain data from just one tax return--and, anyway, never contain the full item content of any one tax return--we request that researchers make these facts clear in publishing their findings. In particular, they should refrain from using any language that would imply that they had access to individual taxpayers' records.

EXPLANATION OF FIELDS NOT ABSTRACTED DIRECTLY FROM TAX FORMS

The following explanations define data fields contained in the 1993 Individual Tax File that have not been abstracted directly from a specific line on Forms 1040, 1040A, 1040EZ, or the accompanying schedules and forms. Field numbers not appearing in this section have been entered on the specific lines on the forms or schedules from which the data were abstracted. Refer to the "1993 Federal Tax Forms" section of this booklet for further information.

<u>Field Number</u>	<u>Definition</u>
20	OTHER NET INCOME OR LOSS Does not include Net Operating Loss nor Foreign Earned Income exclusion.
30	DEDUCTIONS This is either Total Standard Deduction or Total Itemized Deductions. Only one can appear on each return. (Note: If the taxpayer had no income, but still included the total itemized deductions for which he/she was eligible, this amount is shown in Field 30.)
33	COMPUTED REGULAR TAX This is a computed amount arrived at by applying the Tax Rate Schedules to Taxable Income, without regard to the type of computation used by the taxpayer.
35	INCOME SUBJECT TO TAX For taxpayers filing current year returns, "Income Subject to Tax" is identical to taxable income except for: those dependents paying "kiddie" tax from Form 8615; and those returns with long-term capital gains taxed at the 28 percent rate (TXST equals 6 or 7). For dependents filing Form 8615 (TXST = 4 or 8), this is the income taxed at child's rate. For taxpayers with long-term capital gains, this is only the income taxed at the regular rates (not any capital gains that were taxed at the maximum capital gains rate of 28 percent). For prior year returns, "income subject to tax" is computed by using the tax rate schedule to impute a hypothetical taxable income amount necessary to yield the given amount of tax reported.
36	MARGINAL TAX BASE This is the amount of income subject to tax at the marginal tax rate applicable to the return (TXRT), using the 1993 Tax Rate Schedules for all returns. (See Income Subject to Tax).

1993 PUBLIC USE TAX FILE

<u>Field Number</u>	<u>Definition</u>
37	TAX GENERATED This is a computed amount arrived at by applying the Tax Rate Schedules to Income Subject to Tax.
38	TOTAL TAX CREDITS (SOI) Total credits from Form 1040 (line 45) or 1040A (line 24c) plus EARNED INCOME CREDIT USED TO OFFSET INCOME TAX BEFORE CREDITS (F69).
50	TOTAL INCOME TAX Income Tax After Credits (F51) plus Alternative Minimum Tax (F52).
51	INCOME TAX AFTER CREDITS (SOI) Income Tax after Credits from Form 1040 (line 46) or 1040A (line 25) minus the amount of Earned Income Credit used to offset Income Tax Before Credits. For Form 1040EZ, which does not allow for any credits or any other taxes, this is the same as "Total Tax Liability."
57	TOTAL TAX LIABILITY (SOI) Total tax liability (Form 1040, line 53, Form 1040A, line 27, Form 1040-EZ, line 8) minus Advance Earned Income Credit (line 52, Form 1040) payments minus EIC USED TO OFFSET INCOME TAX BEFORE CREDITS (F69) minus EIC USED TO OFFSET ALL OTHER TAXES EXCEPT ADVANCE EIC (F70).
64	TOTAL TAX PAYMENTS Total payments shown on the tax form, minus the total Earned Income Credit (Form 1040 line 60 minus line 56). This is limited to zero if there is a refundable EIC.
69	EARNED INCOME CREDIT USED TO OFFSET INCOME TAX BEFORE CREDITS This amount is the lesser of: Total Earned Income Credit or Income Tax Before Credits (F34) minus all credits except the Earned Income Credit.
70-71	If Total Earned Income Credit (EIC) is greater than Income Tax Before Credits (reduced by all credits except the Earned Income Credit), the following fields are computed: 70 - EARNED INCOME CREDIT USED TO OFFSET ALL OTHER TAXES EXCEPT ADVANCE EIC The lesser of:

TECHNICAL DESCRIPTION OF THE FILE

Each "data record" in the file, representing one tax return, is composed of **1,830 characters**. Blocks are made up of **12 data records** and are separated by a 3/4 inch "inter record gap" (IRG). There is no special indication at the end of a block other than the IRG, and no indication of the end of a data record.

Tape characters are recorded in either EBCDIC or ASCII on a 3480 standard IBM cartridge, however, the user can also request the data on a nine-track, 6250 bytes per inch (BPI) magnetic tape.

Each code and data field is numeric and defined in character format. All codes are unsigned. The data fields are signed positive or negative, whichever is appropriate, in the last character position of the field.

Codes are defined as 2 characters in length. The largest value is 99 with leading zeros. The fields in the file are 10 characters in length with leading zeros. Weight factors are provided to accommodate a decimal integer weighting system.

SAMPLE DESCRIPTION

Sources of the Data

The data in the 1993 Individual Tax File were compiled from a stratified probability sample of unaudited individual income tax returns, Forms 1040, 1040A, and 1040EZ, filed by U.S. citizens and residents. The sample was designated at the Martinsburg Computing Center and was processed in each of the ten Internal Revenue Service Centers during Calendar Year 1994. The total sample of 94,202 returns was selected from a population of 114.6 million returns.

The estimates that are obtained from this file are intended to represent all returns filed for Income Tax Year 1993. While most of the returns processed during Calendar Year 1994 were for Income Tax Year 1993, a few were for prior years. Returns for prior years were used in place of 1993 returns received and processed by December 31, 1994. This was done on the assumption that the characteristics of Income Tax Year 1993 return not yet filed could best be represented by the returns for previous income years that were processed in 1994.

All returns processed during 1994 were subjected to sampling except tentative and amended returns. Tentative returns were not subjected to sampling because the revised returns may have been sampled later on, while amended returns were excluded because the original returns had already been subjected to sampling.

Sample Design and Selection Criteria

Data from Forms 1040, 1040A, 1040EZ, 1040PC, and 1040TEL processed to the IRS Individual Master File System at the Martinsburg Computing Center during Calendar Year 1994 were classified, by computer, into sample strata. Initially, these data were used to assign a return record to one of twenty four income classes based on the larger of positive income or negative income, and the usefulness of the return record for tax modeling purposes. The final sample strata were based on income class, size of Adjusted Gross Income plus the absence of an Income Tax or Alternative Minimum Tax and the size of business plus farm receipts, or the presence or absence of one or more of the following forms: a Form 2555, Foreign Earned Income; a Form 1116, Computation of Foreign Tax Credit; a Schedule C, Profit or Loss from Business or Profession; and, a Schedule F, Farm Income and Expenses. Sixty variables were used to derive positive and negative income and thirty two variables were used to determine the usefulness for tax modeling purposes. The end result was a maximum of 98 strata identified by the sample code.

1993 PUBLIC USE TAX FILE

Returns were then selected from the sample strata using two methodologies. One method used certain ending digits of the social security number (SSN), and the second method used ending digits of numbers generated from transformations of the SSN. The sampling rates for the various strata ranged from 0.02 percent to 100 percent.

Method of Estimation

Sampling weights were obtained by dividing the computer population count of returns filed per sample stratum by the number of sample returns actually received for that stratum (computation carried to two implied decimal places). The file can be weighted with decimal weights by dividing each weight by 100.

Processing and Management of the Sample

While the sample was being selected, the selection process was monitored by applying prescribed sampling rates for each stratum to the population count for that stratum. A follow-up was required to reconcile differences between the actual number of returns selected and the expected number

In transcribing and tabulating the information from the returns in the sample, checks were imposed to improve the quality of the resulting estimates. Incorrect or missing entries on the sampled record were altered during statistical editing to make them consistent with other entries on the return and accompanying schedules. Data were also adjusted during editing in an attempt to achieve consistent statistical definitions. For example, a taxpayer may report director's fees on the other income line of the Form 1040 return. If this situation had been detected during statistical editing, the amount of director's fees would have been entered into the salaries and wages field of the sample record.

Quality of the basic data abstracted was controlled at the processing centers by means of a continuous verification system that used computer tests to check for mathematical errors and inconsistencies in the data. These tests were performed while the returns were still available to aid in resolving the error conditions. Prior to tabulation of the data at the Detroit Computing Center, additional computer tests were applied to each return record to determine the need for adjustments to the data.^{1/}

FIELD NUMBERS

Field Numbers presented on the tax forms and schedules lines can be used to cross reference to the Core Record Layout. An example of this is line 7 on the Form 1040 which has a field number of 2.

7 Wages, salaries, tips, etc.----- 2

On the Core Record Layout it would appear as" 2" to the left of the Salaries and Wages line. See example below.

2. SALARIES AND WAGES
3. TAXABLE INTEREST INCOME
4. TAX-EXEMPT INTEREST INCOME

Another example, Line 8a, Taxable Interest Income, on the Form 1040 (see below) has a field number of 3. This field number is cross referenced to the Taxable Interest Income line on the 1993 Core Record Layout, which contains the number 3 to the left of the line (see above).

with **self-employment** income ▶

Who Must File Schedule SE

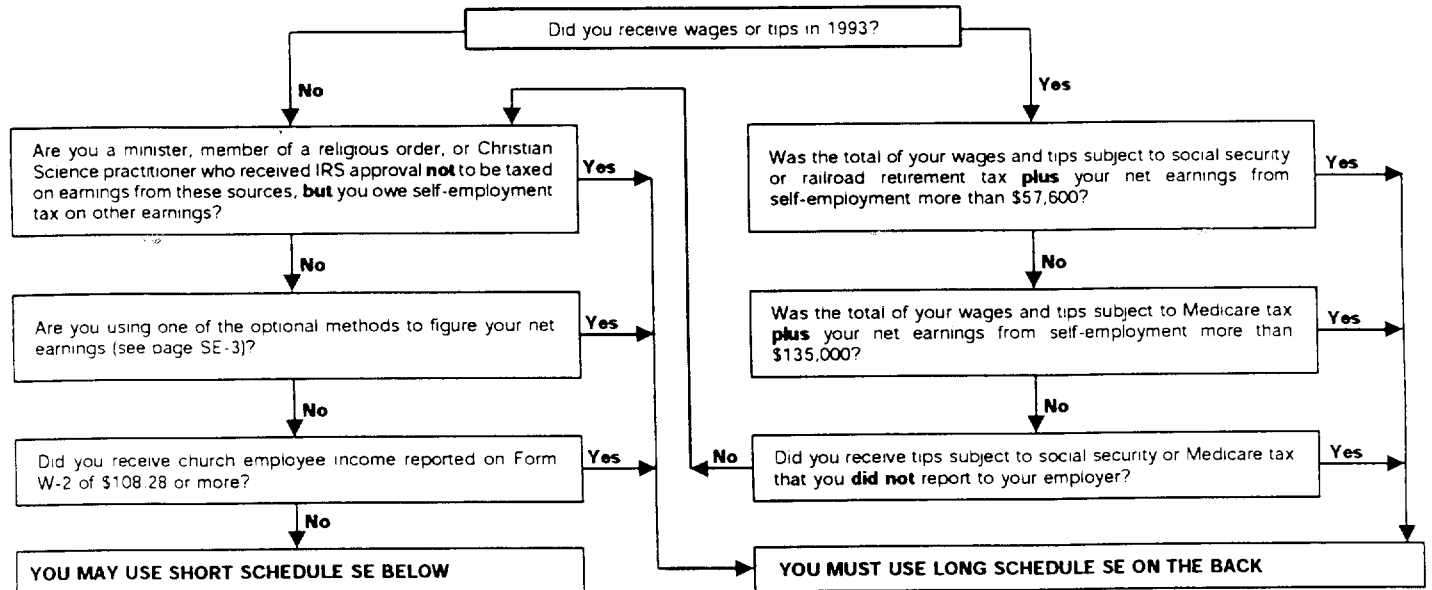

You must file Schedule SE if:

- Your wages (and tips) subject to social security AND Medicare tax (or railroad retirement tax) were less than \$135,000; **AND**
- Your net earnings from self-employment from other than church employee income (line 4 of Short Schedule SE or line 4c of Long Schedule SE) were \$400 or more; **OR**
- You had church employee income of \$108.28 or more. Income from services you performed as a minister or a member of a religious order is **not** church employee income. See page SE-1.

Note: Even if you have a loss or a small amount of income from self-employment, it may be to your benefit to file Schedule SE and use either "optional method" in Part II of Long Schedule SE. See page SE-3.

Exception. If your only self-employment income was from earnings as a minister, member of a religious order, or Christian Science practitioner, **AND** you filed Form 4361 and received IRS approval not to be taxed on those earnings, **DO NOT** file Schedule SE. Instead, write "Exempt-Form 4361" on Form 1040, line 47.

May I Use Short Schedule SE or MUST I Use Long Schedule SE?

Section A—Short Schedule SE. Caution: Read above to see if you can use Short Schedule SE.

1	Net farm profit or (loss) from Schedule F, line 36, and farm partnerships, Schedule K-1 (Form 1065), line 15a		
2	Net profit or (loss) from Schedule C, line 31; Schedule C-EZ, line 3; and Schedule K-1 (Form 1065), line 15a (other than farming). Ministers and members of religious orders see page SE-1 for amounts to report on this line. See page SE-2 for other income to report.		
3	Combine lines 1 and 2		
4	Net earnings from self-employment. Multiply line 3 by 92.35% (.9235). If less than \$400, do not file this schedule; you do not owe self-employment tax ▶		
5	Self-employment tax. If the amount on line 4 is: <ul style="list-style-type: none"> • \$57,600 or less, multiply line 4 by 15.3% (.153) and enter the result. • More than \$57,600 but less than \$135,000, multiply the amount in excess of \$57,600 by 2.9% (.029). Then, add \$8,812.80 to the result and enter the total. • \$135,000 or more, enter \$11,057.40. Also enter on Form 1040, line 47. (Important: You are allowed a deduction for one-half of this amount. Multiply line 5 by 50% (.5) and enter the result on Form 1040, line 25.)

Paperwork Reduction Act Notice

We ask for the information on this form to carry out the Internal Revenue laws of the United States. You are required to give us the information. We need it to ensure that you are complying with these laws and to allow us to figure and collect the right amount of tax.

The time needed to complete and file this form will vary depending on individual circumstances. The estimated average time is:

- Recordkeeping 13 min.
- Learning about the law or the form 15 min.
- Preparing the form 21 min.
- Copying, assembling, and sending the form to the IRS 10 min.

If you have comments concerning the accuracy of these time estimates or suggestions for making this form more simple, we would be happy to hear from you. You can write to both the IRS and the Office of Management and Budget at the addresses listed in the instructions for the tax return with which this form is filed.

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

A Change To Note

Beginning in 1993, for purposes of computing your investment interest expense deduction, net capital gain from the disposition of property held for investment is excluded from investment income. However, you may elect to include in your investment income all or

part of the net capital gain from the disposition of property held for investment if you also reduce the amount of net capital gain eligible for the 28% maximum capital gains rate by the same amount. See the instructions for line 4e on page 2.

Purpose of Form

Interest expense paid by an individual, estate, or a trust on a loan that is allocable to property held for investment may not be fully deductible in the current year. Form 4952 is used to figure the amount of investment interest expense deductible for the current year and the amount, if any, to carry forward to future years.

For more details, get **Pub. 550**, Investment Income and Expenses.

Paperwork Reduction Act Notice

We ask for the information on this form to carry out the Internal Revenue laws of the United States. You are required to give us the information. We need it to ensure that you are complying with these laws and to allow us to figure and collect the right amount of tax.

The time needed to complete and file this form will vary depending on individual circumstances. The estimated average time is:

- Recordkeeping** 1 hr., 33 min.
- Learning about the law or the form** 1 hr., 3 min.
- Preparing the form** 1 hr.
- Copying, assembling, and sending the form to the IRS** 17 min.

If you have comments concerning the accuracy of these time estimates or suggestions for making this form more simple, we would be happy to hear from

you. You can write to both the IRS and the Office of Management and Budget at the addresses listed in the instructions of the tax return with which this form is filed.

General Instructions

Section references are to the Internal Revenue Code.

Purpose of Form

Form 8801 is used by individuals, trusts, and estates to compute the minimum tax credit, if any, for alternative minimum tax (AMT) incurred in prior tax years after 1986. The form is also used to figure any minimum tax credit carryforward that may be used in future years.

Who Should File

Form 8801 should be completed by individuals, trusts, and estates that had:

- An AMT liability in 1992 and adjustments or preferences (other than exclusion items) in 1992;

- A minimum tax credit carryforward from 1992 to 1993; or

- A 1992 unallowed nonconventional source fuel credit or unallowed orphan drug credit (see the instructions for line 20).

Recordkeeping.—Use Form 8801 each year to see if you have a minimum tax credit and to keep track of any credit carryforward (see line 26 of your 1992 Form 8801).

Specific Instructions

The AMT is attributable to two types of adjustments and preferences—“deferral items” and “exclusion items.” The minimum tax credit is allowed only on the AMT attributable to deferral items.

Deferral items are generally adjustments and preferences that do not cause a permanent difference in taxable income over a number of years (e.g., depreciation). **Exclusion items**, on the other hand, cause a permanent difference in taxable income (e.g., the standard deduction).
